- Eastman FlySafe™

Thompson's bird-friendly glass solutions protect birds, meet regulatory requirements, and deliver the highest quality performance

As an Industry leader in advanced glass and lamination technologies, Thompson Innovative Glass offers customers throughout North America a full line of custom glass products. Our Quality Management System is ISO 9001:2015 Certified, assuring the highest quality products.

With access to a variety of bird-friendly glass and interlayer solutions, Thompson is dedicated to providing the highest quality glass products tailored to each customer's exact needs. Our exclusive combination of innovative glass solutions, high-quality fabrication, and expert advice makes us the go-to destination for architects, designers, glaziers, and building owners looking for bird-friendly glass solutions.

With Thompson, you are assured of a bird-friendly glass solution that meets your needs and makes our world safer for birds.

FM 734735

1
Transparency where birds try to reach something behind the glass

2
Large reflective areas

3
Glass corners where glass lites meet at 90 degree angles

4
Channeling effect where a flight path toward glass is created by trees and shrubs

5
Design elements such as interior courtyards and alcoves

6
Glass facades next to roof gardens and terraces

7
Passage-effect where dark/black glass looks like a safe fly-through area

Dangers for birds in an urban environment

As human urbanization increases and natural habitats shrink, animals progressively find obstacles in their path that they are not instinctively familiar with. And with the available space for urban development decreasing, high-rises are more and more common, now also creating obstacles for birds in natural and migratory flight paths. The danger for birds is further amplified by the increased use of glass in architecture.

Architecturally, the use of glass provides a valuable connection with the outside, increasing our well-being. Birds, however, do not recognize glass as an obstacle. They see fly-through or reflected habitat conditions or dark areas that seem like passages through which they can fly, often with deadly results.

As glass is increasingly used in design, muting reflections in glass facades and creating visual markers are ways to create more bird-friendly environments.

Two Approaches to Bird-Friendly Glass

Thompson Innovative Glass can utilize multiple Bird Friendly Glass solutions to meet virtually any project criteria for aesthetics, cost, and bird safety. There are two main pathways to achieve a product that is considered bird-friendly: Performance and Prescriptive.

All of the materials produced by Thompson Innovative Glass fall under one of these headings; with each, a threat factor is generated. A lower threat factor corresponds with the effectiveness of the visible markings (patterns) in reducing bird collisions. The American Bird Conservancy (ABC) defines "bird-friendly" materials as having a Threat Factor less than 30. Please consult local standards/guidelines/codes for more information.

Performance

The Performance path usually refers to an alternative approach, where specific performance metrics are established instead of following strict prescriptive requirements. This approach allows designers and builders more flexibility in achieving the desired outcomes by demonstrating that their design meets or exceeds the performance criteria specified.

Requires bird-friendly products to be tested for effectiveness.
<ul style="list-style-type: none">• Requires live bird test subjects
<ul style="list-style-type: none">• Relies on test facility availability
Acceptable products must meet a maximum allowable tested metric.
Test protocols and experiment facilities will continue to evolve to keep pace with common glazing solutions.

Prescriptive

The Prescriptive path refers to specific requirements and guidelines that must be followed to meet a certain standard or objective. This outlines specific design criteria, materials, and techniques that need to be implemented to minimize bird collisions with glass surfaces. These requirements are typically set by organizations or certification programs dedicated to bird conservation and can vary based on different jurisdictions or standards.

No testing required if product meets prescribed characteristics.
<ul style="list-style-type: none">• Opaque enamel, ceramic ink or other applied opaque pattern. Clear or low-iron glass.
<ul style="list-style-type: none">• Low-E coatings behind pattern; Coating Visible Light Outdoor Reflection <=15%
A pattern that is made up of one of the following elements or a combination:
<ul style="list-style-type: none">• Continuous solid lines at least 1/8" wide, nowhere more than 2" apart for horizontal or angled lines, 4" for vertical lines, measured edge to edge.
<ul style="list-style-type: none">• Circular, square, or irregular solid shapes that are nowhere more than 2" from another shape vertically and nowhere more than 4" from another shape horizontally, or 4.47" diagonally, measured edge to edge. Each shape must have an area of $\geq 0.20 \text{ in}^2$, which corresponds approximately to circles with a diameter of 1/4" (~6mm).
<ul style="list-style-type: none">• Patterns on Surface 1 or Surface 2 only.
<ul style="list-style-type: none">• As viewed from Surface 1, all Low-E coatings must be behind the pattern.

Thompson BirdSafe®

BirdSafe® by Thompson Innovative Glass utilizes Glass Coatings & Concepts' latest innovation, Surface 1. This line of ceramic glass enamels allows visual markers to be placed on Surface 1, which is recognized through testing to be the most effective bird / glass deterrent¹. This ceramic enamel is a permanent coating of engineered ceramics and inorganic pigments. It is highly durable and resistant to UV and outdoor elements. Thompson applies this product directly to the glass via its state-of-the-art screen-printing technology.

BirdSafe meets the prescriptive rating guidelines of bird-friendly glass as developed by the American Bird Conservancy by following the 2x2 Rule or the 2x4 Rule for pattern locations, glass types and orientation of Low-E coatings. When certain requirements are met, the adherence to these rules allows bird-friendly threat factor ratings to be achieved². Thompson uses its standard patterns or custom patterns supplied via a digital file from the customer.

Threat Factor 20

1/4" dots, 2"x2" staggered

Threat Factor 20

1/8" lines, 2" on-center

Threat Factor 25

1/8" vertical lines,
4" on-center

Threat Factor 25

1/4" dots, 2x4 inline

At Thompson Innovative Glass, our full-service fabrication capabilities allow us to provide custom bird-friendly glass solutions to fit the specific needs of any project. We are able to combine BirdSafe with any number of our advanced glass technologies to meet your project's requirements for aesthetics, energy, privacy, safety, security, sound, etc.

BirdSafe can be combined with Thompson's Low-E glass offerings to provide best-in-class thermal performance while not sacrificing natural light. Thompson can manufacture glass products with energy efficient coatings to reach the U-value, shading coefficient, solar heat gain, and visible light transmittance specified.

BirdSafe can also be matched with Thompson's Defender™ line of security and safety glass to offer the peace of mind that building owners and occupants desire. The Defender™ line focuses on bullet-resistant (BR) and forced entry products and is extensively used in school and institutional security. Our Defender BR-rated products are certified through third-party testing to meet industry standard UL 752 safety code requirements.

By leveraging our BirdSafe technology and wide range of solutions, Thompson can tailor its services to fit any design concept that comes from the architectural community.

On the following pages, you will see additional bird-friendly glass solutions Thompson can offer in conjunction with our valued partners.

¹ Visual markers applied on the outside surface of the glass (Surface 1) are typically preferred because research indicates this placement can be the most effective in deterring bird collisions under the widest possible lighting and viewing conditions. (Best Practices for Bird-Friendly Glazing Design, National Glass Association Design Guide DG01-21)

² American Bird Conservancy Prescriptive Rating Guidelines for Bird-friendly Materials 2021

Guardian® Bird1st™ Etch

Guardian Bird1st™ Etch meets both energy performance and bird-friendly regulations and is offered in four patterns that safeguard the style and aesthetics of facades and curtain walls, while meeting bird safety requirements.

Bird1st Etch has been tested and has proven its effectiveness in collision-avoidance.

Bird1st Etch LV

Vertical lines with variable spacing meeting the 2" x4" Rule

Bird1st Etch DX 22

2" x 2" 5mm dots

Bird1st Etch LH

3mm continuous horizontal lines, spaced 2" apart

Bird1st Etch DV 24

2" x 4" 6mm dots

Guardian® Bird1st™ UV

Another bird-friendly option from Guardian is Bird1st UV. This product features a UV stripe on Surface 1 that can be detected by birds but stays transparent in most viewing conditions. Unlike with traditional frit solutions, views remain unobstructed.

For birds, the UV stripe coating is visible and changes what otherwise may seem like fly-through zones into obvious barriers to avoid. By following the 2x2 Rule

to account for different sizes and species of birds, Guardian Bird1st UV meets the "bird-friendly" standards as defined by the American Bird Conservancy.

Bird1st UV coated glass combined with a SunGuard® SN or SNX coating provides bird-strike protection and optimal solar performance.

To birds, the vertical stripe UV coating is visible.

To the human eye, the UV coating is transparent in most viewing conditions.

Walker AviProtek®

With Walker's AviProtek® bird-friendly glass products, Thompson can fabricate glass make-ups in various patterns. These acid-etched markers on Surface 1 maximize the visibility of patterns to birds and minimize the risk of collision, while retaining an aesthetically pleasing appearance.

Walker AviProtek® E

AviProtek E bird-friendly glass combines acid-etched patterns on Surface 1 of the glass with a choice of high-performance Low-E coating on Surface 2. This results in a very effective bird-friendly and energy-efficient glazing solution that puts environmental goals and earning LEED® credits within reach of architects and building owners.

Walker AviProtek® T

AviProtek T bird-friendly glass combines the acid etched markers with pyrolytic UV coatings from Pilkington. This product is well-suited for use in IGU configurations, guard rails, linkways, and shelters and can also help with project certification under LEED and other green building rating systems.

Pilkington AviSafe™

Pilkington AviSafe™ uses a unique-patterned, UV-enhanced coating that disrupts reflections, providing a visible marker to birds and preventing collisions. The technologically-advanced patterned coating on Pilkington AviSafe uses the industry accepted

2x4 Rule making the glass more visible to birds while remaining aesthetically appealing.

When combined with other products, Thompson can offer customized solutions that also address thermal comfort, safety, and noise reduction.

Skyline Design SkySafe™ Bird-Friendly Glass

With SkySafe™, customers have access to Skyline Design's library of proprietary, proven bird-safe patterns or custom patterns can be created. These patterns can be permanently engraved into Surface 1 using Skyline's proprietary Eco-etch® technology, digitally printed onto Surface 1 with ceramic frit, or

laminated between two lites of glass with EVA interlayers.

Unique designs can be created from customer-supplied artwork and tailored to specifications for façades, curtain walls, rain-screens, canopies, railings, wayfinding, and bird-friendly glass.

Kuraray BirdSecure® Pro

Known as BirdSecure® Pro, Kuraray's Trosifol® and SentryGlas® bird-friendly solutions are designed to benefit consumers, society, and the environment by advancing the functionality of glass. Thompson Innovative Glass can utilize BirdSecure Pro interlayer to fabricate laminated glass to specific safety and bird-friendly requirements. Incorporating a dot

pattern that makes it more visible to birds, BirdSecure Pro combines the properties of traditional safety glass with the advanced aesthetics and functionality of its bird-friendly design.

BirdSecure Pro is available in a 3.5" x 3.5" (90 x 90 mm) pattern that features dots with a 1/8" (3mm) or 1/4" (6mm) diameter.

Eastman FlySafe™ 3D

FlySafe™ 3D by Eastman is unique in the way its proven patterns to prevent bird collisions are created. 3D sequins are embedded in the PVB interlayer that catch the light and produce subtle twinkles.

This interlayer's high effectiveness in mitigating bird collisions enables architects and glass laminators to

meet bird-friendly regulations without compromising on safety, security, structural integrity, aesthetics, UV screening, or acoustic control.

The pattern is 3.5" x 3.5" (90mm x 90mm) with sequins that are 3/8" (9mm) in diameter.

Why Choose Thompson?

When it comes to bird-friendly glass there are many options.

What makes having Thompson Innovative Glass as your partner unique?

1. One-stop shop

As a full-service glass fabricator, Thompson Innovative Glass offers a complete line of glass products, including insulated and laminated glass. This means that projects requiring safety glass and 'regular' insulated glass can get it all from the same source.

2. Many Bird-Friendly Glass Solutions

There are multiple glass-based solutions to help protect the bird population. We are proud to fabricate many of them, ensuring your ability to meet virtually any application, code, regulation, or guideline.

3. Customizable

Because Thompson is a full-service fabricator, we can offer customized bird-friendly glass solutions. Customizations can include high-performance Low-E, safety glass, school security, or other specialty glass.

4. Faster Lead Times

With a large team of dedicated employees, Thompson Innovative Glass has the flexibility to pool manpower where most urgently needed. This results in faster lead times when you need your glass 'yesterday'.

5. Competitive pricing

As a full-service fabricator, we work on 'regular' insulated glass as well as on specialty glass products like bird-friendly glass. This translates to zero down-time and lower overhead, resulting in very competitive pricing for you!

6. High-quality

With a state-of-the-art manufacturing facility and multi-step inspection procedures and ISO 9001-certified Quality Management Systems, we guarantee high quality.

7. A partner, not just a supplier

We partner with our customers. We offer advice, on-site visits, and informational presentations to ensure you have the best solution for your project.

Your Partner.

At Thompson Innovative Glass we are proud to do our part to keep birds as safe as the building occupants. Instead of simply being a supplier, we enjoy partnering with you so you get the best solution and ROI for your specific project. When it comes to bird-friendly glass, we can offer many options. So let's take a look at your project and figure out the best solution together.
